Summary

Data Engineer with 3.5+ years of experience in BI and full-stack development, specializing in building automated data pipelines and scalable warehouse solutions.

Experience — 3 years, 8 months

Oracle Financial Services Software | Associate Consultant

June 2022 – Present

- Developed a stored procedure to enable serial COPY on AWS Redshift, due to sequential Airflow DAGs, eliminating recurring manual effort(100% reduction).
- Optimized processes to reduce ingestion time by 85% for new data sources to the data warehouse from a week to a day.
- Created a Python/Bash wrapper framework enabling automated sequential ingestion of large historical datasets.
- Built a Python utility with pandas to standardize raw files with varied schema, making the ingestion schema-agnostic while ensuring data consistency.
- Designed a module to extract large volumes from different cloud DWH clusters to on-premise storage and onto S3 buckets for downstream Databricks usage. Reduced extraction time by 3.6x-5x while effectively recovering 2-4 hours of blocked workstation time per extract.
- Awarded Team Appreciation Award for Q4 2024.
- Finalist in an org-wide AI/GenAI hackathon.
- Awarded quarterly excellence recognition for Q2 2025 in the Americas region.

Projects

Real-time streaming pipeline | Kafka, Python, Postgres, Tableau

GitHub repo

- End-to-end real-time streaming pipeline using Kafka written in Python & Postgres for visualisation of stock market data in Tableau. Data sourced from Alpha Vantage API and running in a docker container.

MedTrends | React, Databricks Workflows, MongoDB, AWS S3, Azure AI, PySpark

- Allows users to upload their medical lab reports and do a multi-modal analysis. Dashboard shows historical trends for a given parameter. *This project is under development.* Databricks Workflows, Azure AI Document Intelligence, Microsoft Presidio & MLFlow are in POC stage.

Bitcoin Price Prediction | Python, ML

- Forecasts next-hour prices using ARIMA & LSTM.

DocDoc | React, Flask, MongoDB, AWS S3

- Allows users to store their medical documents by category: bills, prescriptions, reports.

Travestor | Flask, REST APIs

- Suggests travel destinations based on parameters like ease of attaining visa, currency strength vs INR and weather.

RoadBuddy | Flask, REST APIs, CI/CD, Folium

- Calculates the least polluted route between two places.

Skills

Platforms: Unix-like(macOS, Linux), Windows

Languages: Python, PL/SQL, Java, Shell Scripting, Javascript, HTML, CSS3

Technologies: Apache Airflow, Amazon Redshift, AutoSys, AWS S3

Tools: Git, Jira, Bitbucket, GitHub, JFrog, Jenkins

Frameworks: Flask, Spring Boot, React

Other Skills: ETL, Data Modeling, Data Warehousing, Agile, SDLC

Exposure to Databricks, Snowflake, Amazon MSK (Apache Kafka), EC2, MySQL, NoSQL(MongoDB, Cassandra), Apache Iceberg, Apache Spark (PySpark), Tableau, PowerBI

Certifications

Java (J2EE, J2SE, Java 11), Spring Boot, Microservices, Oracle RDBMS – Oracle | BI Foundations with SQL, ETL & Data Warehousing – IBM | Oracle Cloud Infrastructure 2023 Foundations Associate | Foundations of User Experience (UX) Design – Google (ID: ALVJV7GFBJW3) | Mendix Low-Code Rapid Developer (No. 33878) | AI For Everyone – DeepLearning.AI | GenAI For Everyone – DeepLearning.AI

Education

Kalinga Institute of Industrial Technology | B.Tech in Information Technology (GPA 7.62/10)

2017 – 2022

Loyola School, Jamshedpur | ISC(XII) 83.20% | ICSE(X) 89.17%

2004 – 2017

Achievements & Awards

- Secured podiums in 50+ national and international quizzes, including the **Tata Crucible Business Quiz** (2019) and IIM Calcutta Intaglio Business Summit (2019).
- Winner at the COFAS International Computer Olympiad (IT Quiz & Game Design) and **TCS IT Wiz** (2016).
